Vibrant Colors

The charm of any space can be enhanced by adding colors and textures to uPVC window frames through the art of lamination. This process involves wrapping of UV protected FX Grade foils over uPVC profiles, enriching the looks with vibrant colors and textures. Beyond meeting aesthetic needs, lamination also provides uPVC window frames with extra protection against external pollutants and enhanced durability.

Exterior grade foils from

Aesthetically Pleasing

Architectural structures gain a unique and more striking appeal when adorned with colored and laminated uPVC profiles. These textured profiles not only emulate the elegance of natural wood but also elevate the overall aesthetic, giving any space a refined and premium appearance. Our laminated uPVC profiles are sleek and crafted to captivate the eye.

Eco-Friendly Solution

Our eco-friendly manufacturing facilities are fully equipped to produce lead-free, non-toxic laminated uPVC window profiles with minimal waste, ensuring the conservation of natural resources throughout the process.

Unmatched Features

- Foils featuring PVDF coating - Nanotech
- Exceptionally High UV Weather resistance
- High Quality Adhesives
- Exterior Grade Foils
- Choice of multicolors and Textures
- Easy maintenance
- Eco-friendly process
- European hot melt lamination technology
- PUR adhesives for better bonding
- Certification/ Accreditations from European testing organisations
